

Tattoo, the small revolution

Latest birth from Evolis product range, the **Tattoo** printer is a mixture of technology and innovation. Hi-Tech Design, compactness and ease of use, the **Tattoo** revolutionizes the world of monochrome printing on plastic cards.

Within seconds, the **Tattoo** personalizes in monochrome your pre-printed or blank plastic cards. It prints your high resolution text, bar codes, graphics and logos.

Compact, yet elegant

The **Tattoo** melts perfectly into your environment. It owes its extreme compactness to the Lift Card system which allows the passage of cards on two levels. A completely new system, designed by the Evolis R&D department.

Autonomous, it can also function without a computer, simply connected to a keyboard. Enter your data (name, number, bar code, encoding) and print your cards completely independently. This innovative design is ideal for point of sale and exhibition receptions.

Easy to use, yet powerful

Innovating, the **Tattoo** is equipped with an ingenious process of detachable card feeders. A technology allowing several series of cards to be prepared at the same time. A solution all the more revolutionary since an automatic gauge system analyses the thickness of the cards during each card feeder change. Completely enclosed, the card feeder is dust proof and thus guarantees an optimal card printing quality.

Astute, the **Tattoo** offers a double operating mode simultaneously: Card by card manual feeding from the front mouth and automatic feeding with the 100-cards feeder from the back.

Ergonomic, its opening system allows a direct access to the inside of the printer and thus makes the installation of consumables very easy and quick. The print head can be replaced in a few seconds by the operator without any tool or adjustment thanks to its Push & Twist concept.

Hi-Tech, yet economic

Its price positioning and its cost per printed card make the **Tattoo** the best quality / price ratio on the market of monochrome plastic card printers.
